

TOKEN ECONOMICS

https://ido.dealmpoker.com/

SUMMARY

DLM is the cryptographic token that powers the Deal M Poker® network. It will be minted as an SPL token on Solana with the intent on listing via an IDO on Raydium.

Holders of DLM tokens benefit from specific utility features within the Deal M Poker® ecosystem, as outlined in this document.

TOKEN UTILITY

Within the Deal M Poker® ecosystem, \$DLM is largely utilised as a means of value transfer, supported by three components:

Staking: Deal M Poker® has already started to create the "Poker's Hub" with a staking platform which already allows poker players to open part of their bankroll to investors to finance their participation in famous world tournaments.

In return, part of their winnings is paid back to those who bet on their success.

Gaming: The Deal M Poker® gaming area is a new poker game with a combo of innovation, adrenaline and psychic connection.

Deal M Poker® is reshuffling the cards of online poker by digitising poker players and dealing the cards to fans, players and even investors, who can sit at the tables of the biggest tournaments with Deal M Poker® players.

NFT: An NFT marketplace will be added to the Staking platform. Through this marketplace, Deal M Poker® allows players to monetize their image through NFT cards issuance.

Poker Token holders that will allow access to the marketplace and the buying, selling and trading of NFT cards.

TOKEN UTILITY

Deal M Poker® has designed its business model around a commission-based model.

STAKING REVENUE:

8% commission on winnings (3% from the player and 5% from the investor)

Token use case:

In order to participate in the players' staking pool and to benefit from different rewards and bonuses, the investor will have to stake a minimum amount of DLM tokens.

Tier 1 - X DLM staked: enables the investor to stake on a player

<u>Tier 2 - X DLM staked</u>: enables the investor to stake on a player + X% discount on commissions from the platform

<u>Tier 3 - X DLM staked</u>: enables the investor to stake on a player + X% discount on commissions from the platform + enables the investor to get access to the top poker players on Deal M Poker® 's platform.

NFT Bonus:

NFT holders can earn additional bonuses to increase their winnings when participating in a poker staking pool.

GAMING REVENUE: 10% commission on the tournament/competition entry fees

Token use case:

DLM tokens will be used to pay for the participation fees.

NFT Bonus:

NFT holders can decrease their participation fees.

NFT holders can build their own team by combining different NFTs in order to participate in major tournaments with high potential gains.

NFT REVENUE:

X% commission on initial players' NFTs sales + 2% royalty fees on NFTs trades (secondary market)

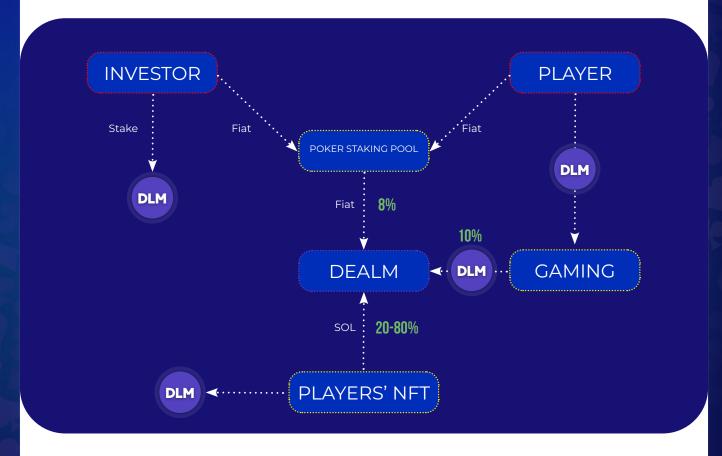

Token use case:

DLM tokens will give premium access to NFT card sales and staking offers

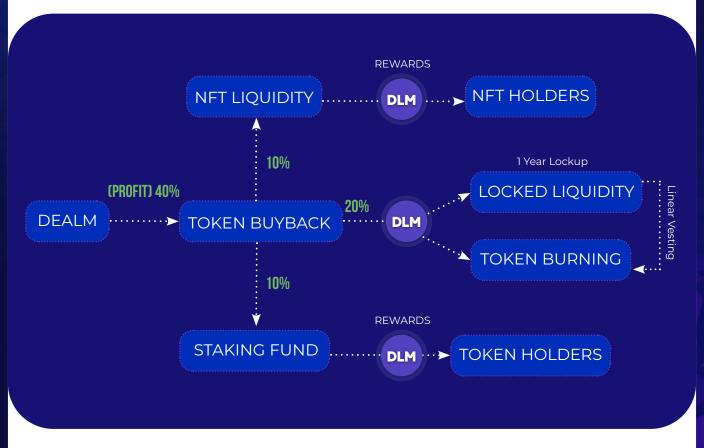

NFT use case:

NFTs are a means of monetizing players' image and skills. NFTs will also give access to world known poker tournaments.

TRANSACTIONS FLOW

PROFIT SHARING MODEL

PROFIT SHARING MODEL

Deal M Poker® features a token buyback program which is funded by a portion (40% currently) of the platform's profits.

The token buyback scheme is intended to add value to the DLM token ecosystem by engaging in one of four activities:

Locking liquidity – a part of repurchased DLM tokens is used to contribute to the DEX liquidity pool in order to improve trading liquidity and encourage a robust secondary market. They are locked in the liquidity pool for one (1) year before being released on a daily linear vesting schedule over the course of another year. These newly released funds are burned, hence lowering the total amount of DLM tokens.

Token Burning – a part of the repurchased DLM tokens is permanently destroyed via token burning. This immediately reduces the total supply of DLM. Burns occur on a regular basis, initially set at once per quarter but subject to community vote.

Staking Fund – a part of the repurchased DLM tokens is used to fund the Staking Fund. WNZ holders that provide liquidity to any of the DLM DEX liquidity pools earn a staking yield that is funded by these collections.

NFT Bonus and Reward Pool – a portion of the repurchased DLM tokens is used to replenish the bonus and reward pool, enabling the incentive program for bonus whitelisting and NFT bonuses to continue.

LP STAKING -Participants can earn DLM by adding liquidity to Deal M Poker's DEX liquidity pool.

When LP shares created by liquidity providers are deposited into the DLM staking contract, Deal M Poker will create a staking contract that is triggered. DLM is paid into the staking pool and earned by LP miners based on their pro-rata portion.

Staking is intended to compensate participants who lock their DLM tokens while also providing much-needed liquidity to the DEX pool. In exchange, they receive DLM from the staking reserve. The staking reserve is a limited and exhaustible resource that is meant to attract early participants while reducing the circulating supply.

SOLANA BLOCKCHAIN

We chose to build our entire ecosystem on Solana and here are the reasons why:

- 1. Lightning-fast transaction: Solana can handle up to 50,000 transactions per second, making it the most powerful blockchain network. This makes it ideal for high-volume NFT marketplaces.
- 2. Low fees: Because of Solana's high transaction throughput, fees are very low compared to other blockchains. This makes it perfectly suitable for the creation & exchange of NFT cards of poker players through our NFT marketplace.
- 3. Solana Blockchain satisfies the three essential properties as Decentralized, Scalable, and Secure.
- 4. Flexible smart contract platform: Solana's smart contract platform is extremely flexible, allowing us to easily create the custom functionality we need for our NFT marketplace.
- 5. Active development community: Solana has a large and active development community that is always working on improving the blockchain. The ecosystem is growing exponentially.
